

# On-line movie rental

## JJ movie

*Jakub Ajchel*

*Jerzy Bednarski*

Our project will be an on-line video rental platform. Different users will be able to rent videos and pay for them on-line. Each user should have an account on the platform. According to his/her previous choices and other users' choices platform will recommend each user movies which suit him/her.

Platform will consist of multiple parts:

- web application for customers with login window, search engine, recommendations and cart
- dashboard for platform's owner presenting statistics of video rental
- database with few thousands of movies with their descriptions

## How will we share our duties:

### Jakub Ajchel:

- project of database and creating it in SQL Lite
- search engine and payment system

### Jerzy Bednarski:

- client-server connection and login page
- dashboard for platform's owner

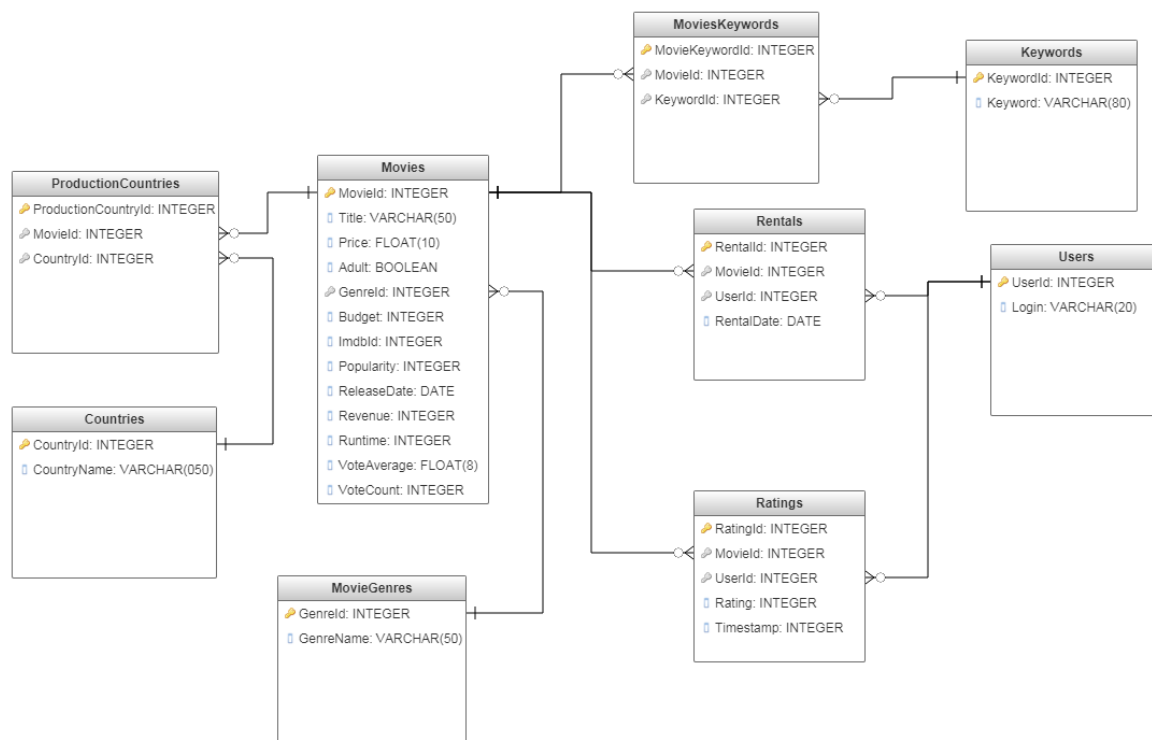

### Both of us:

- recommendation system

### Optional part:

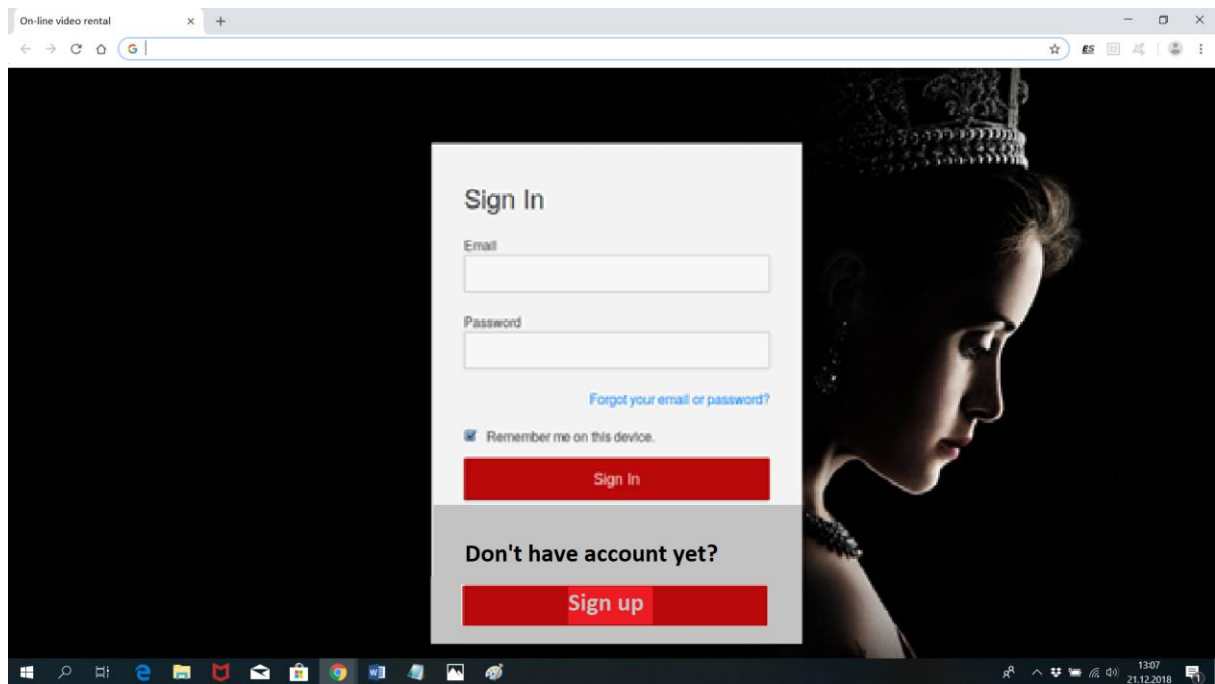

- Enabling process of payment transaction using blockchain technology (adding bank entity)

## Database project:

## Project of webpage layout:

### Login page:

### Main website:
